Fixed Issues

Issues that have been fixed in this release.

#8212

LOGIN PASSWORD FIELD TRUNCATES THE PASSWORD

When logging in to the Password Manager, the user password was truncated to 8 characters, as the input field for the password was defined as 8 characters.

In version 7.0 the maximum input length for passwords at login is 72 characters.

Known Issues

Issues identified in this release, with workarounds where appropriate.

#464

UNEXPECTED CHARACTERS RETURNED WITH UTF-8 ENCODED BROWSER

If your browser is set to use UTF-8 encoding, entering certain special characters in the data fields can return 2 or more unexpected characters when you press enter or click a control in the user interface. These unexpected characters are then also included in related log messages.
