DATASHEET (DIGITAL DEFENSE)

Threat Landscape

Shine a light on the truly critical vulnerabilities.

Staying abreast of the most used exploits and exploit kits, popular crimeware, and threat trends is a tall order, but doesn't have to be an all-consuming task. With the right tools, it is possible to process threat intelligence efficiently – distilling and correlating to existing vulnerability management frameworks so that your team can properly prioritize remediation tasks that are truly critical to your business.

Fortra's Digital Defense Threat Landscape enables organizations to prioritize remediation efforts by combining:

- Real-world vulnerability exploitation metrics
- Industry-standard severity scores
- Our Vulnerability Research Team analyst insight

This powerful combination of threat intelligence data delivers a more granular determination of risk for vulnerabilities identified in the network.

Threat Landscape is powered by the Threat Analysis Pipeline (TAP), our proprietary machine learning model that aggregates daily threat intelligence feeds to correlate reported incidents with vulnerability exploitation. TAP combines common vulnerability metrics such as CVSS, CWE, and CPE with vulnerability exploitation data. The result is an enriched data set to determine the likelihood of exploitability for each vulnerability, and the likelihood of weaponization of each exploit in the wild, as they relate to your environment.

Threat Landscape includes:

- **Threat Rank** – identifies upcoming exploitation vectors yet to be realized in the wild. Using these models, organizations can stay ahead of attacker-weaponized vulnerabilities by resolving those most likely to be exploited. *Threat Rank is included in all VM subscriptions.*
- **Active Risk Score** – utilizes prebuilt or configurable risk profiles combining vulnerability severity, Threat Rank, asset exposure, and asset criticality to create and rate your organization's actual risk appetite. *Active Risk Score is available as a subscription-based feature.*

Exclusive to Threat Landscape subscriptions are a host of dashboards that provide insight into vulnerability threat risk on your network.

Empower your security operations center to analyze and report on trends and metrics for every asset and vulnerability in your Threat Landscape, and demonstrate targeted, measurable progress in securing your environment.

Cut through the noise and shine a light on actionable remediation efforts that will protect your organization from compromise today.
