

PCI-Pro

RESULTS

PCI-Pro allows organizations to:

- Leverage Digital Defense technical expertise and world-class customer service and support
- Focus on core business functions to save time, money, and effort by reducing the administrative burden and tedium of performing vulnerability scans with complicated tools or undamaged open source solutions
- Demonstrate your commitment to information security with comprehensive reporting on the security posture of your network
- Detect possible security vulnerabilities and respond quickly with actions based on your pre-defined security policies
- Achieve compliance with PCI DSS Private Employee Information

If I'm Compliant, Why Don't I Feel More Secure?

It is easy to confuse compliance with security. But regulations are by necessity backward-looking, addressing the needs of yesterday's business environment. How does a business maintain their compliance while maintaining vigilance to current information security threats?

PCI-Pro Bolsters Security Beyond Compliance

Fortra's PCI-Pro combines the comprehensive service suite of a Digital Defense subscription with our managed PCI compliance services. As a certified PCI Approved Scanning Vendor (ASV), Digital Defense was the first to approach PCI compliance as a managed service. Now we take this one-step further to offer full vulnerability management as a part of PCI-Pro through a tiered approach.

Instead of running scan after scan on an enterprise with a "fail until you pass" mindset to compliance, with PCI-Pro we approach compliance as the top tier of a multi-layered pyramid involving comprehensive vulnerability assessment and remediation management as the other two layers along with PCI Compliance Assessment.

The first tier focuses on comprehensive Vulnerability Assessments, which include:

- External and Internal Vulnerability Scanning
- Robust Technical and Executive Reporting
- Vulnerability Workflow Management
- Trend and Activity Reporting

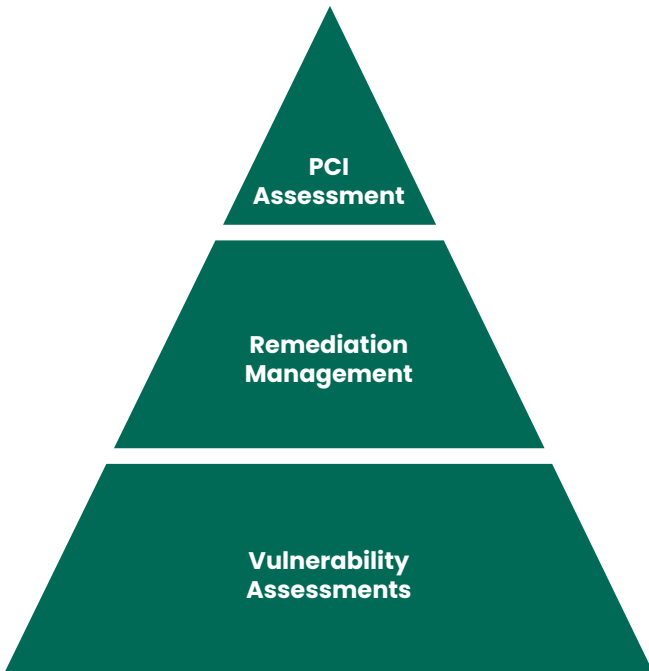

The second tier focuses on remediation management and addressing the identified vulnerabilities in a systematic, efficient, and cost-effective manner.

This tier includes:

- Access to a Personal Security Analyst
- Remediation Prioritization and Assignment
- Custom Management Reporting
- Enterprise-wide assessment of Vulnerability Remediation progress

The final tier focuses on taking the results of the first two tiers and producing the reports necessary to document successful completion of the PCI DSS

testing. This includes necessary follow-on scanning to substantiate progress against eliminating previously discovered vulnerabilities.

PCI-Pro layered service delivery model

Now is the Time to Go Beyond Compliance to Improve Security.
