

CASE STUDY (Cybersecurity)

Pharmaceutical company saves time and reduces cost through data transfer automation with EFT™

Globalscape EFT™ Simplifies Submission of Regulatory Documentation for Pharma

Overview

A large pharmaceutical company was considering using Enhanced File Transfer™ (EFT™) Enterprise with Event Rules as a way to cut costs and increase operational efficiency. The organization relied on the timely submission of its regulatory documentation to bring its products to market faster so their customers can get much needed medical medication.

Challenge

Each batch of submissions required time-consuming human intervention and additional firewall protections to ensure security and compliance mandates were met. When submitting test results errors, vulnerability risks grew each time a human was involved in the process.

Each submission required the user to consolidated files from multiple sources and send the files via a portal webpage or using a local SFTP client installed on individual computers, which introduced maintenance and support costs.

Implementation

Globalscape and its Professional Services team put together a solution for the organization using EFT Enterprise with Event Rules along with a series of customization services. The Event Rules in EFT Enterprise automated the test results submission process, by taking each of the files from various sources, and then transferring the files via either SFTP or AS2 protocols to the required agencies. This process was automated with a single Event Rule.

KEY DETAILS

OUTCOME

-  Simplified submission process through easy to use custom-built web portal
-  Automated email notifications for completed submissions
-  Meet or exceed compliance with government regulations
-  Data transfer security

APPLICATION

- + Reduced costs by eliminating SFTP client software
- + Automate test results with Event Rules and transfer data via SFTP or AS2 protocols
- + Reduce human error through automated submissions, compiled by EFT

PRODUCTS

- + EFT™ Enterprise
- + Event Rules

Result

By automating the submission of its regulatory information, the risks associated with human error were nearly eliminated, the support costs associated with SFTP client software was gone, and the number of open ports that allowed outbound transfers were greatly reduced, increasing security. End users are now able to access a custom-built web portal, enter the path to the submission files, email address, and transfer credentials, and then EFT compiles the required information and transmits it securely and efficiently to different regulatory agencies.

The end users are notified of the transmission results via email. With EFT Enterprise and Event Rules, the organization reduced costs, relieved the strain and overhead for end users, removed much of the human error, and implemented a solution to expedite the process, all while meeting or exceeding government regulations.

About HelpSystems

HelpSystems is a people-first software company focused on helping exceptional organizations Build a Better IT™. Our holistic suite of security and automation solutions create a simpler, smarter, and more powerful IT. With customers in over 100 countries and across all industries, organizations everywhere trust HelpSystems to provide peace of mind. Learn more at www.helpsystems.com.
