

Neutralize File Threats with Votiro Integration for GoAnywhere MFT

Achieve complete content protection for your file transfers with the Votiro Disarmer integration

GoAnywhere and Votiro: A Smart Integration

File encryption has become a necessary part of organizations' everyday strategies. With more personal data stored, processed, or shared online, it's not enough to protect data whenever it's at rest. Every transmission, connection, and integration shared with trading partners and other organizations should also be secure to safeguard data in transit.

GoAnywhere MFT is a secure file transfer solution that secures, streamlines, and automates file transfers in transit and at rest. It works in the cloud and on-premises to simplify connections made with trading partners, provide granular security controls and user management to reduce internal risks, and meet file transfer compliance requirements—so businesses can focus less on manual processes and more on what really matters.

Together, GoAnywhere MFT and Votiro Disarmer create a powerful security layer for critical file transfers. GoAnywhere provides

end-to-end encryption with secure protocols for batch and ad-hoc file transfer requests. Votiro Disarmer uses Content Disarm and Reconstruction (CDR) technology to sanitize your files of any malicious threats, known or unknown, no matter where they come from. This allows your employees to open any file without having to think twice about whether it's safe to do so. Once the file is sanitized by Votiro, it's good to go.

GoAnywhere Votiro Cloud Connector

GoAnywhere MFT offers Cloud Connectors, built-in integrations that allow users to easily integrate with the external web and cloud applications they use every day. Cloud Connectors contain all the actions required to communicate with integrated applications.

The Votiro Cloud Connector provides full content protection for your file transfers. Created for GoAnywhere MFT users, this integration can remove zero-day and known threats from files being sent or received by GoAnywhere MFT before they come into your internal network.

How the Cloud Connector Works

Once the Votiro Cloud Connector has been installed into a GoAnywhere MFT environment, a GoAnywhere MFT project workflow can be used to send files to your Votiro server. These files are then disarmed from viruses and malware, preserving the original content and functionality of the files. Once this process is complete, you can transfer the processed files to their intended destination.

Use the Votiro Cloud Connector to complete the following actions:

Sanitize File	Files are automatically cleaned by Votiro, removing any viruses or malware from the file.
Download File	Download a sanitized file from the Votiro server.
Get Sanitization Report	Download a report with detailed information on what was found by the Votiro solution including threats found and neutralized.
Check File Status	Use this action to return the status of the file processing from Votiro. Statuses include; Done, Blocked, Error, Processing, Queued, or Limit Exceeded.
Scan and Download File	Get the sanitization report, sanitize the file, and download the file all at once.

How to Get Started

For existing Votiro and GoAnywhere MFT users, the Cloud Connector is easily accessible by logging into the GoAnywhere admin interface, navigating to System > Cloud Connectors, clicking "Add Connector," and selecting the Votiro Cloud Connector.

Try a free 30-day trial of Votiro at www.votiro.com/free-trial. A free trial of GoAnywhere MFT is also available at www.goanywhere.com/trial.

About HelpSystems

HelpSystems develops powerful, easy-to-use solutions for cybersecurity, IT operations management and monitoring, business intelligence, and document management. Their software simplifies everyday operations to help organizations save time, cut costs, and keep business processes running smoothly. Part of the HelpSystems family, GoAnywhere MFT is a secure file transfer solution for streamlining and automating critical data transmissions between organizations and their trading partners. About Votiro

Votiro specializes in cybersecurity software that neutralizes files containing zero-day and undisclosed attacks. Their next-generation patented CDR technology disarms threats that other products fail to expose, leaving Votiro customers with a secure, fully usable data flow across all channels of incoming files. Votiro is certified by the international standard of Common Criteria for Information Technology Security Evaluation (ISO/IEC 15408).
