Secure, PCI-Compliant File Transfers for Banking & Finance Organizations

Banking and finance organizations have a lot to consider when it comes to running smoothly. With an increasing demand for online access and strong cybersecurity practices, balancing customer needs with business needs can be stressful—sometimes even overwhelming.

Struggles with inefficient existing processes and compliance for heavily regulated privacy laws can also distract from achieving critical file transfer requirements, like encrypted data, optimal communication with trading partners, and activity logs for auditing and reporting.

Some organizations use legacy tools and manual scripts to meet their needs, but this approach often creates more vulnerabilities than it solves. As a result, more banks and financing agencies are starting to move to managed file transfer solutions like **GoAnywhere MFT** to simplify, secure, and automate their file transfers.

The Benefits of Managed File Transfer

GoAnywhere MFT is a flexible, easy-to-use solution that deploys to a variety of environments and provides an immediate ROI for file transfers. Whether you need to make your existing processes more efficient, reduce or reallocate your resources, or meet auditing requirements for your organization, GoAnywhere can help.

Here are a few examples of how managed file transfer can simplify your job responsibilities:

Satisfy Compliance: Meet file transfer compliance obligations for PCI DSS, GLBA, Basel III, SOX, and the Dodd-Frank Act, as well as any local and state privacy laws you may have.

Track File Transfer Activity: Monitor your file transfers with GoAnywhere's activity logs. Logs include information on the name of the file, who sent it, who received it, and if it was transmitted successfully. Activity can be compiled and exported as a PDF report for specified trading partners.

Manage Security Controls: Rely on managed file transfer security settings, including segmented groups for multiple security zones and a key management system (KMS) for key pairs and certificates, to meet strict in-house, state, federal, and industry policies.

Automate Batch File Transfers: Determine when your file transfers should perform with GoAnywhere's built-in scheduler. Batch file transfers can be scheduled to run at a future date and time. If you want to execute multiple file transfers concurrently, trigger one when another process completes, or kickoff a transfer immediately when a file is added to a specific folder, you can do that too.

Reduce Your Costs: Eliminate the need for custom scripts, legacy programs, and homegrown tools. These file transfer methods introduce the possibility of user errors and unwanted vulnerabilities, lack good auditing functionality, and require in-depth knowledge on how to update or expand them—all of which can be costly to navigate and maintain.

Support Your Team: Meet your IT professionals where they are with GoAnywhere's flexible web interface. File transfers and other processes can be performed from anywhere through HTTPS, and mobile support will give your team flexibility to work from any device.

Meet Your PCI DSS Requirements

GoAnywhere can manage multiple file transfer processes and workflows seamlessly, regardless of changing data security requirements. For those who need to remain compliant with the Payment Card Industry's Data Security Standard (PCI DSS), GoAnywhere provides the following benefits:

PCI DSS Security Settings Report: This audit report tests over 60 of your security settings against known PCI DSS requirements and outputs a PDF that shows you how each area of the solution performed against PCI DSS 3.2. Recommend actions are provided for remedying any settings that require further inspection or aren't currently compliant.

Industry Standard Encryption and Protocols: GoAnywhere supports popular encryption methods like OpenPGP and Zip with AES encryption, as well as secure protocols FTPS, SFTP, SCP, HTTPS, and AS2, to ensure customer data is safeguarded in transit between customers, servers, trading partners, and branch locations.

Discover How Your Peers Use GoAnywhere MFT

Organizations of every industry and size rely on GoAnywhere to protect sensitive data in transit and at rest. Explore these case studies to learn how three banks use MFT daily to solve their biggest obstacles and requirements.
