What is Managed File Transfer?

Encompasses all File Transfers—Batch and Ad Hoc, Inbound and Outbound

File Transfer = Sharing files with others

Batch

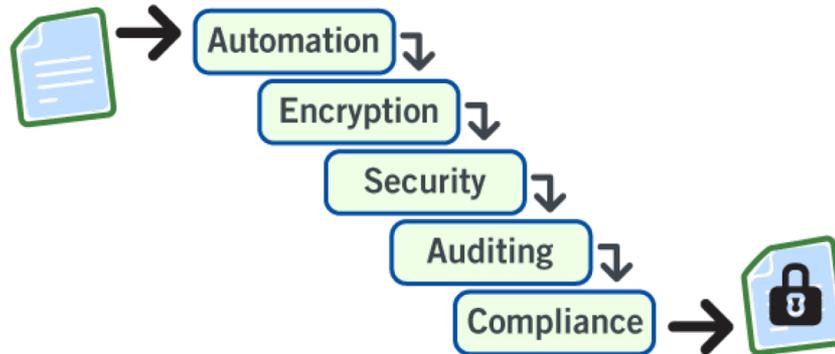

Email

Cloud

Managed File Transfer = Automating and Securing file transfers using a centralized enterprise-level approach.

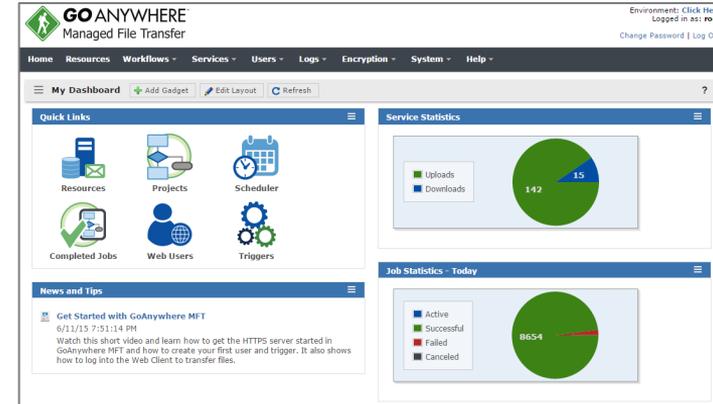

GoAnywhere MFT Overview

Enterprise Features

- ▶ **Multi-platform** - Installs to most operating systems including IBM i, Windows, Linux, AIX, UNIX, Amazon and Azure.
- ▶ **Batch and Ad Hoc** - Allows organizations to perform both scheduled batch transfers and user-to-user file sharing.
- ▶ **Auditing** - Generates detailed audit logs of all file activity including batch, ad hoc, inbound and outbound transfers.
- ▶ **Interface** - Provides a browser-based interface for all administration and monitoring. No desktop client is needed.
- ▶ **Inbound Services** - Allows inbound connections from trading partners over SFTP, FTP/S, HTTPS and AS2 (Drummond Certified).
- ▶ **Encryption** - Protects files at-rest and in-motion with FIPS 140-2 validated AES-256 encryption.
- ▶ **Key Management** - Provides integrated tools for creating and managing Open PGP keys, SSH keys and SSL certificates.
- ▶ **Admin Controls** – Implements role-based administration, security domains and granular permission controls.

Enterprise Features

- ▶ **Private Cloud** – Eliminates the need for public file sharing services like Dropbox, Box, Google Drive and OneDrive.
- ▶ **Customer Portal** – Allows you to provide custom-branded web interfaces for secure file transfers over HTTPS.
- ▶ **Secure Mail** – Allows employees to send large or confidential files through secure email links. Includes an Outlook plugin.
- ▶ **Two-Factor** - Authenticates with user credentials and SAML, RSA SecurID, RADIUS, SSH keys or X.509 certificates.
- ▶ **DMZ Gateway** - Keeps services and files in the private network (out of the DMZ) without requiring inbound ports.
- ▶ **Job Control** - Provides extensive job management features including job queues and run priorities.
- ▶ **File Transfer Acceleration** - Enables high speed transmission of large files between systems using UDP channels.
- ▶ **Clustering** - Provides high availability and load balancing by connecting two or more instances together in a cluster.

What's new in version 6?

- ▶ New Web Client interface
 - ▶ Plus new brand customization options
- ▶ Public links for GoDrive
- ▶ Time-based one-time passwords for web and admin user authentication
- ▶ Modernized email notifications

Cloud Connectors

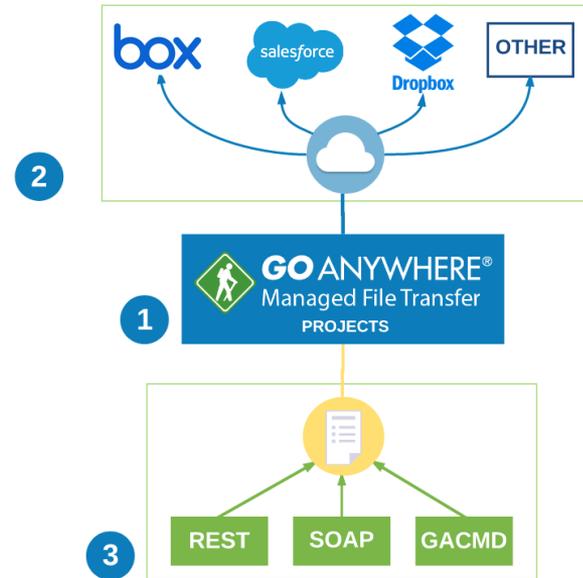

- ▶ GoAnywhere MFT offers **out-of-the-box integration** with **popular applications** like:
 - ▶ NEW! Citrix ShareFile
 - ▶ NEW! JIRA
 - ▶ NEW! Trello
 - ▶ Plus dozens of others including Salesforce, SharePoint, Box, Google Drive, and more
- ▶ Integrate with popular Web Service APIs
- ▶ **Build your own** Cloud Connectors with our easy drag-and-drop designer
- ▶ Download Cloud Connectors in our **online marketplace**

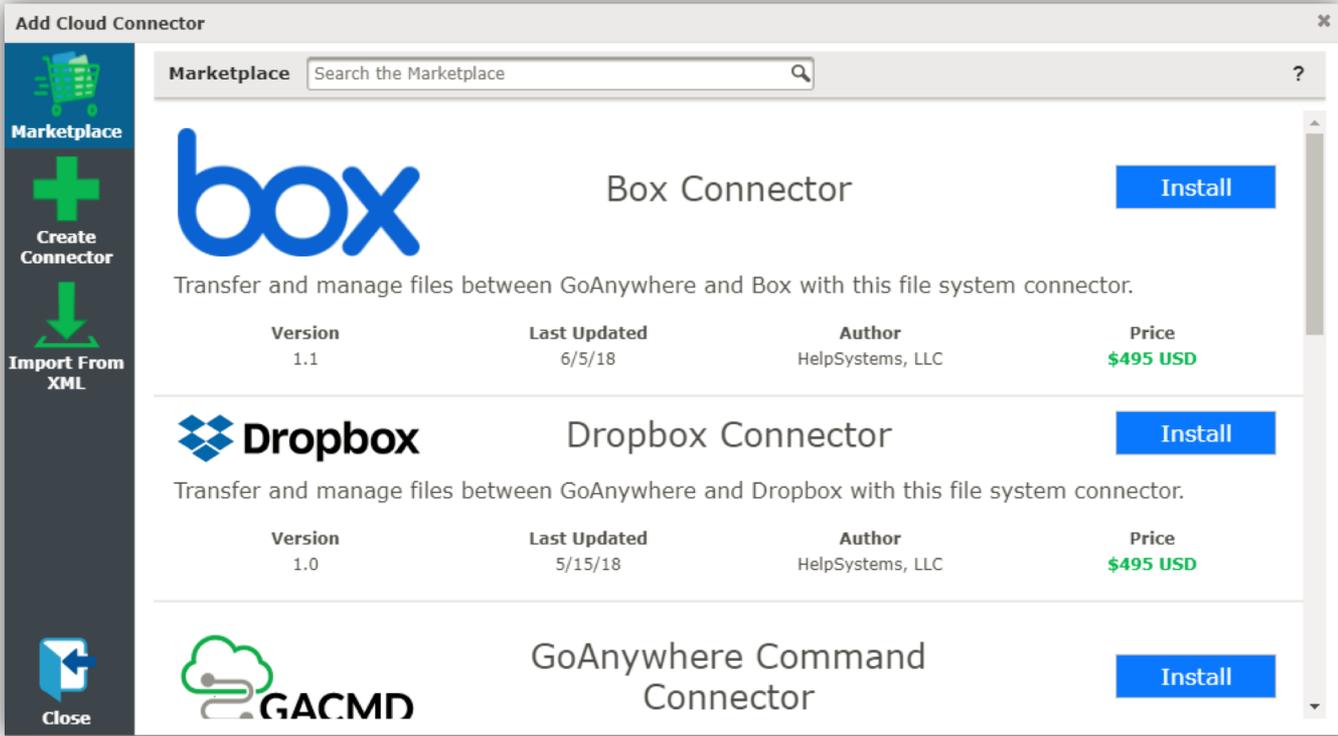

Learn more about Cloud Connectors at
www.goanywhere.com/cloud-integrations

How do Cloud Connectors work?

1. GoAnywhere MFT workflows automate the encryption, data translation, and compression of data.
2. Cloud Connectors move the data to/from RESTful Web Services.
3. Secure Forms and GoAnywhere Command integrate your existing applications to use GoAnywhere's workflow automation.

Cloud Connector Marketplace

Add Cloud Connector

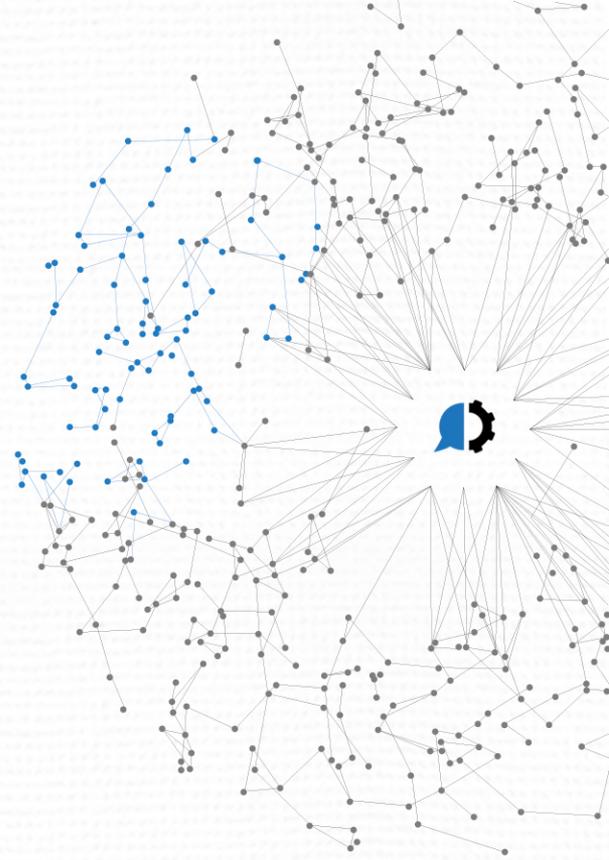

Marketplace

	Box Connector	Install	
Transfer and manage files between GoAnywhere and Box with this file system connector.
