Secure Mail

▶ **Send files of any size via email securely**

- ▶ The Secure Mail module in GoAnywhere MFT allows your employees to send messages and files as secure "packages" on an ad-hoc basis.

- ▶ Recipients download the message and files through a secure HTTPS connection.

- ▶ There are no file size or file type restrictions – making it a great alternative to regular email.

- ▶ A Secure Mail package can be sent to multiple individuals; each recipient receives a unique link for security and tracking purposes. Packages can be additionally protected with passwords.

Employee · Email Notification · Recipients · GoAnywhere MFT · Download Files Securely

Secure ICAP Integration

▶ **Inspect content flowing through GoAnywhere**

- ▶ **Data Loss Prevention** modifies and sanitizes content
  - ▶ Document Sanitization
  - ▶ Data Redaction
  - ▶ Anti-Steganography
  - ▶ Optical Character Recognition
- ▶ **Threat protection** prevents malicious content from getting out or in
 - ▶ Anti-Virus
  - ▶ Structural Sanitization

Managed File Transfer

Content Inspection
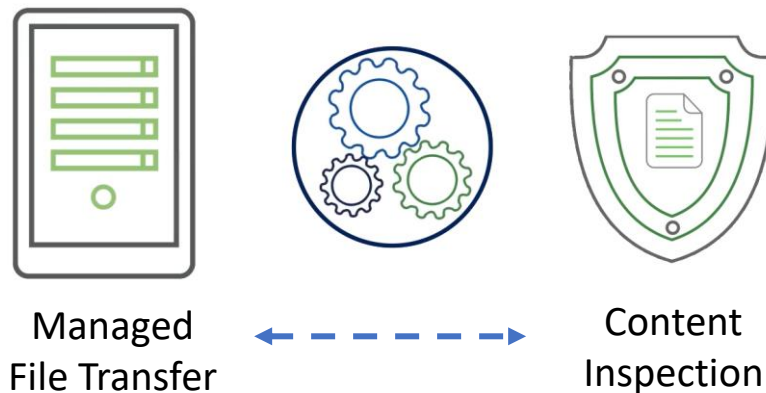

Cloud Connectors

▶ **Automate business processes with easy cloud connectors**

  ▶ Cloud Connectors are built-in web and cloud application integrations that connect to your GoAnywhere MFT projects and workflows.

  ▶ Cloud connectors let you easily integrate with external cloud and web applications used daily.

  ▶ With cloud connectors, you can connect to popular services including Salesforce, SharePoint, Microsoft Dynamics 365, Box, Dropbox – and more.

  ▶ GoAnywhere supports a limitless number of cloud application integrations, so you can automate your processes between multiple web and cloud services at once.
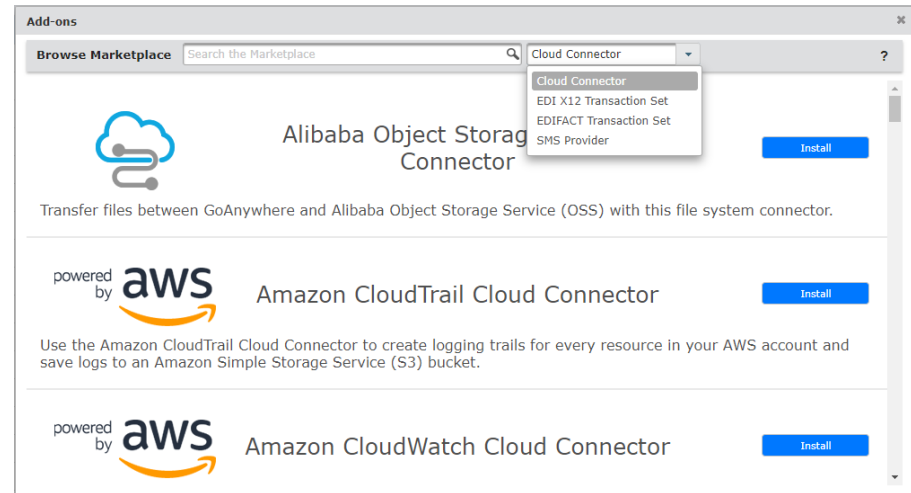

Secure Forms

▶ **Fill out and submit custom forms**

  ▶ The Secure Forms module allows end-users to fill out custom forms with one or more input values and upload files through the HTTPS Web Client.

  ▶ Users can also submit forms by making SOAP or REST requests from custom-built applications.

  ▶ When a form is submitted, a Project in GoAnywhere is executed to automatically process the submitted values and files.

  ▶ GoAnywhere administrators can define one or more Secure Forms with configurable input fields, custom labels, and file upload components to control the data provided when a form is submitted.

Advanced Workflows

▶ **Create projects to execute a seamless workflow**

  ▸ You can create "Projects" or "Workflows" in GoAnywhere MFT to define the file transfers and business processes to perform.

  ▸ A Project can contain multiple steps (tasks) to execute a seamless end-to-end workflow.

  ▸ There are no limits to the number of tasks that can be performed within a single Project.

  ▸ Projects are designed using intuitive wizards and templates with the GoAnywhere MFT browser-based interface.

  ▸ No programming or special technical skills are needed.

Live Demo Areas of Focus

✓ Secure Mail

✓ Secure ICAP Integration

✓ Cloud Connectors

✓ Secure Forms

✓ Advanced Workflows

Thank you for joining us!

▶ Questions about new GoAnywhere features? We're happy to help.

  ▶ goanywhere.support@helpsystems.com
