

GoAnywhere MFT + Clearswift Advanced Threat Protection and Adaptive Data Loss Prevention for Managed File Transfer

The online sharing of information between trading partners has not only accelerated collaboration but transformed the digital fabric of today's businesses. Along with the need to share information comes the risk of exposing the wrong content and the question of how this data can be shared securely. Files containing confidential information, either visible within the file or hidden within metadata, can be mistakenly shared. And, sending and receiving files potentially opens the door to malware, or threats hidden in file transfers, if not secured properly and sent safely. As part of HelpSystems' suite of security products, GoAnywhere MFT and Clearswift work together to enable information sharing with unprecedented management and security.

Secure Collaboration Solution

Organizations can gain full control of how information moves around when shared both internally and externally. Managed data flows can be easily defined to exchange information through a portal, transfer files through secure FTP, or even move files in network shares. By integrating a deep layer of inspection and sanitization through an ICAP protocol, additional information controls can enforce adaptive security and compliance policies for file transfers.

GoAnywhere Managed File Transfer

GoAnywhere MFT streamlines the exchange of data between your systems, employees, customers, and trading partners. It provides a single point of control with extensive security settings, detailed audit trails, and reports. An intuitive interface and comprehensive workflow features help eliminate the need for custom programs/scripts, single-function tools, and manual processes. This innovative solution reduces costs, improves file transfer quality, and helps your organization comply with data security policies and regulations.

Automation

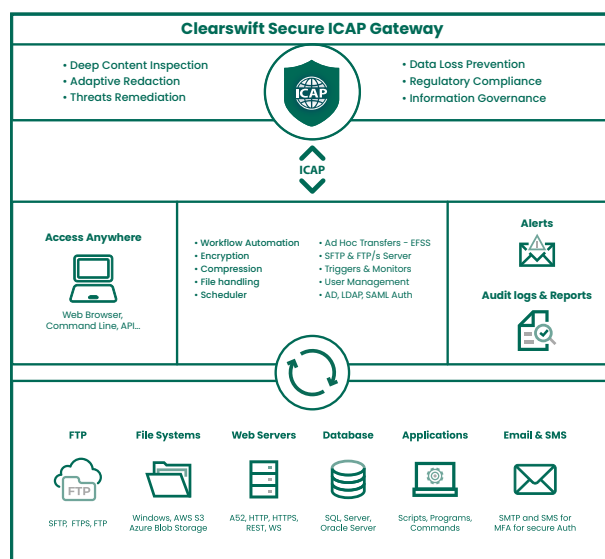

Eliminates the need for multiple products and scripts with workflows and, you can program when your files should move between internal systems, users, or trading partners. Automation also helps manage reoccurring or high-volume file transfers.

Collaboration

Easily share files and collaborate with colleagues, customers, and trading partners with a solution that can be deployed on-premises, in the cloud, or in a hybrid environment. GoAnywhere can also help meet compliance requirements with enterprise-grade security and audit logs.

Encryption and Compression

Ensure the privacy and integrity of your data, whether stored to disk or transmitted outside your organization. Encryption capability also helps comply with PCI DSS, state privacy laws, and federal regulations such as HIPAA and Sarbanes-Oxley.

Clearswift Secure ICAP Gateway

The Clearswift SECURE ICAP Gateway is the market-leading solution for enhancing your infrastructure, balancing the need for data security and protection with continuous collaboration. Organizations can apply deep content inspection, Adaptive Data Loss Prevention, and Advanced Threat protection technologies to align the flow of information to information governance policies, mitigating risk and underpinning compliance requirements.

Deep Content Inspection

Clearswift's deep content inspection exceeds what is traditionally offered. It is not limited by zip/encryption, file size, analysis timing delays, virtual environment evasion techniques, or multiple embedded document layers. It offers amongst the highest detection rates and lowest impact.

Adaptive Data Loss Prevention

Adaptive Data Loss Prevention (DLP) is the non-disruptive removal or transformation of data according to policy (rules), to ensure that information shared complies with corporate security policies before it is sent to or received by the recipient (person, application or system). Intelligent policy enforcement is applied to only the information that breaks policy and compliance regulations, allowing the rest of the business activity to continue. Adaptive DLP also sanitizes MFT documents by stripping out hidden metadata and information that can be harvested and used for targeted phishing attacks.

Traditional data loss prevention solutions offer a basic "yes" or "no" response to attempts to share information, as they lack the architectural design to disassemble, inspect, amend, and reassemble the content "in its original format." DLP removes this barrier by modifying the information in real-time to ensure only the acceptable level of information is shared and received, and that critical information remains safe.

Advanced Threat Protection

This feature detects and automatically strips out active content like embedded malware, triggered executables, scripts, or macros used to extract or hold sensitive data hostage. Clearswift's Advanced Threat Protection sanitizes—without delay in delivery—as only the malicious active content is removed, allowing the file transfer to continue unhindered. This morph-free protection guards against today's leading malware and ransomware (i.e. CryptoLocker, CryptoWall, TorrentLocker, Dridex, Dyre, BlackEnergy, etc.) and tomorrow's even more sophisticated variants.

Business Benefits

- Secure collaboration
- Protection against cyber threats
- Automation of vital business processes
- Assurance of complete information control

Fortra Security Suite Highlights

GoAnywhere + Clearswift

Share critical information inside and outside your organization with an unprecedented level of management control and security. Together, Clearswift and HelpSystems introduce the world's first integrated Advanced Threat Protection and Adaptive Data Loss Prevention solution for Managed File Transfer (MFT). Its unique automated data redaction and sanitization layer ensures that information shared is only accessed by authorized parties and safe from malicious threats.

About GoAnywhere MFT

GoAnywhere ranks as the #1 Managed File Transfer Solution in a Report by Info-Tech Research Group.

GoAnywhere MFT is an award-winning managed file transfer software which streamlines, secures, and automates critical file transfers through a centralized enterprise-level solution. It is the fastest-growing MFT product in the world and allows organizations to connect to internal and external systems, as well as exchange encrypted data using industry standard protocols (e.g. OpenPGP, AES, FTPS, SFTP, HTTPS, AS2, and GPG). Beyond securing data transfers, GoAnywhere MFT seamlessly works with applications you use every day, such as EDI and cloud integration. This solution can save you time and money, improve security, and help meet compliance requirements.
