

DATASHEET (Cybersecurity)

Cybersecurity by Fortra

Chances are, your team is struggling to keep up with the ever-growing workload, increasing security threats, and shifting priorities that have become hallmarks of today's IT environment. Instead of proactively building your security posture, you're forced to be reactive, always fighting the biggest fire first. You need a better way.

It's time to protect your organization with proactive, automated cybersecurity solutions. The Fortra Data Security and Infrastructure Protection suites help you stay ahead of today's ever-changing threats and will get your security journey back on track.

Data Security for the Entire Lifecycle

To ensure your organization's data is secure, you need complete visibility over what data you have, where it is, whether that's on premise or in the cloud, and how it's being shared. Without controls, you risk a costly data breach that will damage your company's reputation and customer relationships.

And just like your security journey, data has a journey too. The Fortra Data Security Suite is powerful, data-centric security for unstructured data. Regardless of how it moves or where it lives, data is identified, secured, and protected throughout its journey.

Data Protection

Identify and prioritize the data you need to protect, including critical unstructured data such as intellectual property. Before data can be shared, it must be discovered, classified, and protected appropriately. Whether your critical data is intellectual property, PII, or other sensitive data, our data protection solutions [identify and classify](#) the data, [prevent data loss](#) according to policy, block threats, and ultimately [manage rights and control](#) so wherever it is shared, you can secure, track, audit, and revoke access to it as needed. These solutions offer essential management and control of your data to ensure compliance – and our experts work with you to select the best solution to fit your needs.

Email Security

Transform email from a high-risk communication channel to one that is safe and secure. Our [email security](#) solutions protect against email attacks, such as phishing, spoofing, and business email compromise, as well as enforce DLP and compliance policies.

Secure Managed File Transfer

Automated [secure MFT solutions](#) provide a safe and compliant way to share data within and outside your organization, all through a centralized platform. Encryption ensures that files are delivered safely and only opened by the intended recipients.

With the addition of email DLP, you can ensure that files sent and received do not contain any sensitive data or unwanted cyber threats. Layering on rights management provides additional control and encryption wherever the files travel.

Digital Risk Protection

Safeguard critical digital assets with expert-curated threat intelligence and mitigation services. Our [digital risk protection](#) solutions collect and curate threat information, then conduct rapid, complete mitigation, including killswitches, fastlanes, and API integrations.

Infrastructure Protection for Proactive Security

Today's threat landscape is moving so rapidly that it's essential to anticipate attacks and adapt your cybersecurity strategy to avoid becoming the next security breach.

Our [Infrastructure Protection Suite](#) helps your organization cut through the noise by finding and prioritizing risks that pose the biggest threat to your organization. With broad visibility into your environment's security stance, you get insight into what steps are needed to proactively fix security gaps and put barriers in place.

Vulnerability Management

Fortrra's [vulnerability management](#) and threat assessment solutions are constantly scanning for network and application vulnerabilities. The solutions are flexible, accurate, and easy-to-use. They make it simple to identify and prioritize vulnerabilities in your organization and help inform strategic remediation.

Penetration Testing

Empower your team to find the weak spots in your security. Our powerful [penetration testing](#) tools let you replicate attacks in your environment in a safe and efficient way. With this centralized toolset, you gather information, exploit systems, and generate reports, all in one place. Stay one step ahead of cyber attackers.

Adversary Simulation

Emulate tactics and techniques of a threat actor in your network with our robust threat emulation tool. It provides a postexploitation agent and covert channels which are ideal for adversary simulations and Red Team exercises.

Professional Security Services

With our professional security services, organizations safeguard their IT infrastructure from cyber-attacks through exercises that highlight security gaps. Our cybersecurity experts offer a consultative approach, ensuring you get services tailored to your needs.

Services Include:

- Penetration Testing
- Software Security Assessments
- Red Teaming
- Enterprise Risk Assessments
- Physical Security Testing
- Social Engineering Testing
