Investigating options that address your business continuity insecurities requires expertise, time, and resources. It’s no surprise that many businesses feel they have a significant knowledge gap when it comes to creating a solid business continuity plan—much less the time and in-house expertise to do it right.

Who Is This Service For?
This service is for IBM i shops of any size and industry, especially those shops that are ready to take disaster recovery to the next level and need help researching the right backup/recovery and high availability technologies for their environment or architecting a new business continuity strategy to improve recovery time and recovery point objectives.

What Is It?
Our Business Continuity Architecture service begins with a Backup and Recovery Assessment. Once our experts are familiar with your current backup tools and tactics, we will design an improved backup and recovery, disaster recovery, or high availability strategy based on industry best practices that meets your unique needs. Our experts will also investigate and make recommendations on the best technologies for your business.

When Is It Most Valuable?
We recommend that you contact our experts before you experience a disaster scenario or other outage. This service provides a roadmap for implementing the tools and techniques that will lead to recovery readiness and prevent panic situations. If you are currently dealing with a crisis, call us right away and we’ll point you in the right direction.

Where Does It Take Place?
Business Continuity Architecture is a 5-day service that can take place remotely or on premise at your data center. It includes 8 hours for Q&A or additional education when you go to implement your plan.

How Do I Get Started?
Call us at 800-328-1000, email info@helpsystems.com, or submit a request online to schedule a free consultation. We’ll review your current setup and see how HelpSystems services can help you achieve your business continuity goals.
