

DATASHEET

Whether on the desktop or in the cloud, email continues to be the primary method for sharing information among employees, customers, and partners. This presents a challenge for organizations that must protect information assets while promoting information sharing. The critical first step in solving this challenge is to classify email at the time of creation, allowing organizations to identify the information's value, and manage the data accordingly.

Titus Message Classification is a security and governance solution that ensures that all Microsoft Outlook messages are classified before they are sent. With support for both Windows and Mac, as well as on the desktop and online, Titus provides the broadest email classification coverage available. Flexible classification options enable user-driven, system-suggested or automatic application of the classification based on the recipient, sender, content, and other email attributes. Should an email violate security policies, Titus blocks or warns the user and provides remediation options, preventing potential data breaches.

By assisting users to classify emails upon creation, organizations can add structure to the vast number of emails that are sent every day. This helps to prevent inadvertent disclosure, meet compliance requirements, and enhance infrastructure solutions such as archiving, DLP, and encryption¹.

Protect sensitive information with visual markings and metadata

HIGHLIGHTS

Titus Message Classification is an easy-to-use, multi-platform email security solution that ensures every Microsoft Outlook email is classified and protectively marked before it is sent. The solution helps organizations:

- Identify information sensitivity
- Prevent data loss
- Meet compliance needs

SYSTEM REQUIREMENTS

Titus Message Classification Supports:

- Outlook for Windows 2010- 2019
- Outlook for Mac 2016
- Microsoft Exchange 2010-2016
- Outlook on the Web for Exchange Online

¹ Available for Outlook for Windows only

Titus Classification for **Microsoft Outlook**

KEY FEATURE	BENEFIT
Classification Selector	Provides simple, non-intrusive ways for users to identify the sensitivity of email with classification labels including: One Click Classification ¹ , classification via prompts, system-suggested, and automatic classification based on recipient, content, and other email attributes.
Visual Markings	Applies visual markings in the email subject line and message body to clearly identify information sensitivity.
Multi-Platform Support	Supports Outlook for both Windows and Mac, as well as Outlook on the desktop and online ensuring the broadest possible coverage across the organization to mitigate risk of data loss.
Metadata Assist	Stores user classification selections with the email as persistent metadata, which can be used to increase the accuracy and effectiveness of DLP, archiving and perimeter security solutions.
Policy Enforcement	Inspects the email for policy violations before the message leaves the desktop, providing instant feedback so that the sender can correct any problems. Rich and flexible policies can be triggered by comparing multiple values, including: email and attachment contents ² , sender and recipient attributes, and classifications or the absence of classification.
Security Enablement	Adds an extra layer of security by automatically encrypting, signing, or RMS-protecting sensitive emails based on classification, recipient, content or any other email attribute ¹ .
Administration	Provides a centralized, web-based Administration Console for classification configuration and policy management across the entire Titus Classification Suite of products. Titus generates user activity logs that can be monitored and analyzed to measure the effectiveness of the security policies and detect anomalous usage.

¹ Available for Outlook for Windows only

² Attachment metadata can be read on all platforms. Attachment content reading is available on Outlook for Windows and Outlook Online only
